## Naughty CAUTI CSI or "Crack the Case"

Here's a CAUTI from 4/19/15. It was our only CAUTI in April!

Check out the first attachment (CAUTI CASE) to see the case details. As you read through the details, super sleuth it and put the pieces together. Then ask yourself the following:

- Could this CAUTI have been prevented? If so, how?
- While trying to answer those two questions, ask yourself:
  - Could the Foley have come out sooner or did it have an appropriate indication for the patient at the time the CAUTI occurred?
  - Do you think aseptic insertion techniques were followed?
  - Do you think the Foley was properly maintained?
  - Do you think the UC was ordered appropriately?
  - Can you think of anything else that could have been done to avoid this CAUTI?
  - Finally, what have you learned from this case that can help prevent future CAUTIs?

**Check out the second attachment for the likely answers.**

**We have made a change on PB2000 because of this CAUTI.**

**Try to figure it out before reading the ANSWERS attachment.**
